## Uninterruptible Power Supply (UPS) for ECO THREAD 751K

### Technical Data:

Inputvoltage:	70V DC / 24V DC
Supply period:	30 sec
Buffer time:	< 5 sec
Dimensions:	358x250x300

1 UPS unit per 6-Spindles 751K needed.

### Function:

In case a primary power cut is detected (after 3-5sec), the machine will be ramped down in a controlled way. This avoids waste bobbins, as the typical „ring winding“ is eliminated. After power cut, the machines can be simply re-started by pushing the start button.

**Delivery time: approx. 5 weeks**
